CTO OFFICE · PROJECTS & PROGRAMS

# SPECULA

One place to see the status of all CTO Office projects and programs.

Say it: SPEK-yoo-lah · Latin · plural *speculae*

## What is Specula?

Specula is the platform the **CTO Office uses to manage its projects and programs**. It gives one view of where each program stands and the work behind it.

You will also see the Specula name and mark on CTO Office program material, employee web forms and parts of the application. What you share through them comes into this one view.

## What does the name mean?

> **spĕcŭla** noun, feminine
>
> A lookout point: a high place from which you can see everything around you.

It comes from the Latin **specere**, *"to look"*. The same root gives us:

speculate / spectacle / inspect / perspective / prospect / respect

## Why this name fits

01

### A view over all programs

Every CTO Office project and program can be seen from one place, along with what is moving and what is stuck.

02

### Problems are caught early

Inputs from web forms and project updates come into one view, so delays and opportunities are noticed before they cost time or money.

03

### A common signature

Short and easy to recognise. The same name and mark on program material, forms and screens mark the work as CTO Office.

## Reading the mark

**Red top**
Alerts. Flags the items that need attention.

**Tiers**
Daily work at the base, projects in the middle, programs at the top.

- **Vertical lines**
  Workstreams running in parallel and rolling up into one view.
- **Base line**
  One common data source for all projects and programs.
